UNITED STATES DISTRICT COURT  
NORTHERN DISTRICT OF CALIFORNIA

BRANDON BANKS, et al.,  
Plaintiffs,  
v.  
NISSAN NORTH AMERICA, INC.,  
Defendant.

Case No. 11-cv-2022-PJH

**ORDER DENYING FINAL  
SETTLEMENT APPROVAL AND  
ATTORNEYS' FEES**

United States District Court  
Northern District of California

The parties' motion for final class action settlement approval and plaintiffs' motion for attorneys' fees came on for hearing before this court on May 20, 2015. Plaintiffs Brandon Banks, Erin Banks, and David Soloway ("plaintiffs") appeared through their counsel, Michael Ram, Kirk Wolden, and Ryan Lutz. Defendant Nissan North America, Inc. ("defendant" or "Nissan") appeared through its counsel, G. Charles Nierlich. After the hearing, the parties submitted a supplemental report regarding the submission of claims to the settlement administrator. Having read the parties' papers and carefully considered the arguments and the relevant legal authority, and good cause appearing, the court hereby rules as follows.

**BACKGROUND**

This is a product liability class action involving Nissan vehicles. The suit arose out of problems that certain Nissan vehicle owners had with a component of the vehicle's brake booster, called the Delta Stroke Sensor ("DSS"). Plaintiffs Brandon and Erin Banks owned a 2004 Nissan Titan<sup>1</sup>, and in the summer of 2010, Ms. Banks was driving the vehicle with her two small children in the back seat. See Fifth Amended Complaint

---

<sup>1</sup> The complaint originally alleged that the Bankses owned a Nissan Armada, but the operative 5AC states that they owned a Nissan Titan.

1 (“5AC”), ¶¶ 12-13. Ms. Banks approached an intersection at approximately 40 miles per  
2 hour, saw a red light, and applied the brakes. However, the brakes did not slow the  
3 vehicle, even as Ms. Banks “repeatedly attempted to firmly apply and/or pump the  
4 brakes.” Id., ¶ 13. Ultimately, Ms. Banks coasted through the intersection, against the  
5 red light, at approximately 40 miles per hour. Id.

6 After experiencing multiple similar failures, Mr. Banks took the vehicle back to the  
7 dealership, where he was advised that the only way to fix the problem was by replacing  
8 the DSS, at a price exceeding \$1,000. 5AC, ¶ 14. Mr. Banks asked if the dealership  
9 would pay for the cost of replacement, but the dealership refused. Id.

10 Mr. Banks then contacted Nissan’s consumer affairs department, but was told that  
11 Nissan had made the decision to deny coverage. 5AC, ¶ 19. As a result of the denial,  
12 the Bankses had to pay the cost of the DSS replacement out of pocket, which cost them  
13 \$967.13. Id.

14 Plaintiff Soloway had a similar experience with his 2006 Infiniti QX56. In August  
15 2011, Mr. Soloway’s brother-in-law was driving the vehicle along with Mr. Soloway’s wife  
16 and son. 5AC, ¶ 21. As the car approached a red light, the driver attempted to brake,  
17 but the vehicle did not stop, ultimately running through the intersection against a red light.  
18 Id. Mr. Soloway contacted the dealership, but was told that he would have to pay for the  
19 repair himself, which he did, at a cost of \$618.84. Id., ¶¶ 22-23.

20 Plaintiffs filed suit in April 2011, alleging that the DSS was defectively designed  
21 such that it would fail suddenly and without warning, causing the brakes to lose  
22 significant and substantial braking power.

23 Plaintiffs obtained certification of the following class:

24 All consumer residents in California who own 2004-2008 Nissan Armada,  
25 Titan (equipped with VDC), and Infiniti QX56 vehicles manufactured before  
26 April 1, 2008 (“Affected Vehicles”) and all consumer residents in California  
27 who do not presently own Affected Vehicles but incurred monetary loss  
28 caused by the failure of the Delta Stroke Sensor in their Affected Vehicles.  
This definition specifically excludes any and all persons who assert  
personal injury claims arising from or relating to the failure of the Delta  
Stroke Sensor in their Affected Vehicles.

1 After certification of the California class, defendant sought permission to appeal  
2 the certification order, but the Ninth Circuit denied such permission. See Dkt. 130.  
3 Subsequently, the parties entered into settlement negotiations, and on December 5,  
4 2014, the parties filed a motion for preliminary settlement approval. The motion sought  
5 certification of a nationwide settlement class, defined as follows:

6 All persons in the United States who currently own a model year 2004-2008  
7 Nissan Titan (equipped with VDC), Nissan Armada, or Infiniti QX56 vehicle,  
8 or do not presently own one of these vehicles but previously did, and  
9 incurred the expense of repairing or replacing the Delta Stroke Sensor  
10 (“DSS”) in the vehicle during their period of ownership. “Settlement Class  
11 Member(s)” means any member of the Settlement Class who does not elect  
12 exclusion or opt out from the Settlement Class pursuant to the terms and  
13 conditions for exclusion set out in the Settlement Agreement and Release  
14 and the Long Form Notice. Excluded from the Settlement Class are all  
15 persons who are employees, directors, officers and agents of NNA or its  
16 subsidiaries and affiliated companies, as well as the judges, clerks, and  
17 staff members of the United States District Court for the Northern District of  
18 California, the Ninth Circuit Court of Appeals, the United States Supreme  
19 Court, and their immediate family members. Also excluded from the  
20 Settlement Class are all claims for personal injury relating in any way to  
21 2004-2008 Nissan Titan (equipped with VDC), Nissan Armada, and Infiniti  
22 QX56 vehicles.

23 The proposed settlement provides for reimbursement claims for owners and/or  
24 former owners of 263,967 affected vehicles, with the value of the reimbursement claims  
25 ranging from \$800 to \$20 (or less), depending on the mileage of the affected vehicle at  
26 the time of repair. The proposed settlement also provides for \$5,000 “service payments”  
27 to Erin Banks, Brandon Banks, David Soloway, and Tom West; and for \$3,425,000 to be  
28 paid to class counsel.

29 The court granted the parties’ motion for preliminary approval on December 24,  
30 2014. See Dkt. 173. On May 1, 2015, the parties moved for final approval of the  
31 settlement.

32 At the final approval hearing, the court expressed skepticism that the proposed  
33 settlement was fair, reasonable, and adequate. In particular, the court was concerned  
34 about the large drop-off in the reimbursement amounts for claimants whose vehicle’s

1 mileage was over 60,000 miles at the time of repair, the documentation required to  
2 submit a successful claim (including the requirement that the repair receipt contain the  
3 specific “C1179” error code), and the fact that only 1,472 class members had submitted  
4 claims.

5 In addition, the parties were unable to provide any information regarding the  
6 reimbursement amounts that those 1,472 claimants would receive – in other words,  
7 whether the majority of those claimants would receive \$800, or \$20, or something in  
8 between. The court also discussed the objections filed by class members, most of which  
9 focused on the small percentage of repair costs that were being reimbursed and the large  
10 proposed award of attorneys’ fees.

11 Taking into account the objections as well as the court’s own concerns, the court  
12 opted to defer a determination on the settlement until after it received a final claims  
13 submissions report. Specifically, the court directed the parties to have the settlement  
14 administrator file a report setting forth (1) the overall number of claims granted and  
15 denied, (2) how many (if any) claims were denied because of the absence of a diagnostic  
16 code on the claim submission form, and (3) how many claimants fell within each of the  
17 payout ranges.

18 On October 9, 2015, the settlement administrator filed a report indicating that  
19 2,100 claims had been submitted, of which 1,540 were determined to be valid. See Dkt.  
20 201. None were denied based on the absence of a diagnostic code, though 494 claims  
21 were denied for failure “to provide any supporting documentation of a brake booster  
22 repair.” There are 66 additional claims which were “pending a final status” because the  
23 administrator had requested additional information from the claimants.

24 The payout ranges of the claims are as follows:  
25  
26  
27  
28

Mileage range	Reimbursement rate	Number of valid claims	Total payout	Average payout
Under 48,000	80% (of repair costs, with a \$800 max)	194	\$111,479.26	\$574.64
48,000-60,000	57.5% (\$575 max)	131	\$53,469.78	\$408.17
60,000-80,000	20% (\$200 max)	320	\$48,562.04	\$151.76
80,000-100,000	17.5% (\$175 max)	334	\$46,234.52	\$138.43
100,000- 120,000	6% (\$60 max)	241	\$11,810.81	\$49.01
Over 120,000	\$20 max	320	\$6,500.00	\$20.31 <sup>2</sup>
<b>Total</b>		<b>1,540</b>	<b>\$278,056.41</b>	<b>\$180.56</b>

## DISCUSSION

### A. Legal Standard

#### 1. Motion for final settlement approval

A certified class action may not be settled without court approval. See Fed. R. Civ. P. 23(e)(1)(A). In order for approval to be granted, the court must find that the settlement is “fair, reasonable, and adequate,” after holding a hearing on the matter. See Fed. R. Civ. P. 23(e)(1)(C). At the fairness hearing, the burden is on the proponents of the settlement to disclose what consideration is being given or paid for the dismissal of the class claims, and they must further prove that: the settlement is not collusive and is the result of arms’ length negotiation; sufficient discovery has been conducted by the lawyer representing the class to evaluate claims and defenses; the lawyer recommending the settlement is competent, experienced and not subject to influence by the opposing party; and only a small fraction of the class has objected. See, e.g., In re General Motors

<sup>2</sup> The parties have not explained how this number is above \$20 when the maximum payout for this mileage range was supposed to be \$20.

1 Corp. Pick-Up Truck Fuel Tank Prod. Liab. Litig., 55 F.3d 768, 785 (3d Cir. 1995); In re  
2 Gen. Motors Corp. Engine Interchange Litig., 594 F.2d 1106, 1126 (7th Cir. 1979).

3 Ultimately, in deciding whether the settlement is fair and reasonable, the court  
4 will consider such factors as (1) the strength of the plaintiffs' case; (2) the risk, expense,  
5 complexity, and likely duration of further litigation; (3) the risk of maintaining class action  
6 status throughout the trial; (4) the amount offered in settlement; (5) the extent of  
7 discovery completed and the stage of the proceedings; (6) the experience and views of  
8 counsel; (7) the presence of a governmental participant; and (8) the reaction of the class  
9 members to the proposed settlement. Churchill Village, LLC v. General Electric, 361  
10 F.3d 566, 575 (9th Cir. 2004); see also Rodriguez v. West Publishing Group, 563 F.3d  
11 948, 963 (9th Cir. 2009).

12 Any class member may object to the proposed settlement, and the trial court must  
13 allow all objectors the opportunity to present evidence showing that the settlement is  
14 contrary to the best interests of the class. See In re Gen. Motors Corp., 594 F.2d at  
15 1131.

## 16 2. Motion for attorneys' fees

17 Attorneys' fees and costs may be awarded in a certified class action under Federal  
18 Rule of Civil Procedure 23(h). When included in a class action settlement agreement,  
19 attorneys' fees provisions, like every other aspect of such agreements, must be found  
20 "fair, reasonable, and adequate" in order to be approved. Fed. R. Civ. P. 23(e); Staton v.  
21 Boeing Co., 327 F.3d 938, 963 (9th Cir. 2003). To "avoid abdicating its responsibility to  
22 review the agreement for the protection of the class, a district court must carefully assess  
23 the reasonableness of a fee amount spelled out in a class action settlement agreement."  
24 Staton, 327 F.3d at 963.

25 The Ninth Circuit has approved two different methods of calculating reasonable  
26 attorneys' fees in common fund cases: the percentage method and the lodestar method.  
27 Hanlon v. Chrysler Corp., 150 F.3d 1011, 1029 (9th Cir. 1998). The percentage method  
28 simply awards the attorneys a percentage of the fund. The Ninth Circuit has established

1 twenty-five percent as the benchmark in percentage-of-the-fund cases, which can be  
2 adjusted upward or downward to account for any unusual circumstances presented by  
3 the particular case. Id.

4 The lodestar method is primarily used in cases involving a statutory fee-shifting  
5 provision or where the relief sought is injunctive in nature and thus not easily monetized.  
6 See, e.g., Hanlon, 150 F.3d at 1029; In re General Motors, 55 F.3d at 821. In lodestar  
7 cases, “to calculate the ‘lodestar’ amount, [the court] multipl[ies] the number of hours  
8 reasonably expended by the attorney(s) on the litigation by a reasonable hourly rate,  
9 raising or lowering the lodestar according to the factors identified by this circuit.” Gerwen  
10 v. Guarantee Mutual Life Co., 214 F.3d 1041, 1045 (9th Cir. 2000). The Supreme Court  
11 has articulated eleven factors relevant in calculating the lodestar figure: (1) the time and  
12 labor required; (2) the novelty and difficulty of the issues; (3) the skill requisite to perform  
13 the legal service properly; (4) the preclusion of employment by the attorney due to  
14 acceptance of the case; (5) the customary fee; (6) time limitations; (7) the amount  
15 involved and the results obtained; (8) the experience, reputation and ability of the  
16 attorneys; (9) the undesirability of the case; (10) the nature and length of the professional  
17 relationship with the client; and (11) awards in similar cases. Hensley v. Eckerhart, 461  
18 U.S. 424, 433 (1983).

19 While courts have discretion to use either the percentage method or the lodestar  
20 method, such discretion should be exercised to achieve the ultimate goal of a reasonable  
21 award. In re Coordinated Pretrial Proceedings, 109 F.3d 602, 607 (9th Cir. 1997).

22 B. Legal Analysis

23 In the context of class action settlements, the district court has a duty to safeguard  
24 the interests of the class members. The Ninth Circuit has referred to this as a “fiduciary  
25 duty,” subject to the “high duty of care that the law requires of fiduciaries.” Allen v.  
26 Bedolla, 787 F.3d 1218, 1223 (9th Cir. 2015) (citing Reynolds v. Beneficial Nat’l Bank,

1 288 F.3d 277, 280 (7th Cir. 2002)).<sup>3</sup> To that end, the court has reviewed not only the  
 2 cases cited within the two pending motions, but has also considered other relevant Ninth  
 3 Circuit case law. In particular, the court finds that In re Bluetooth Headset Products  
 4 Liability Litigation, a case not included among the 47 cited in the two motions, addresses  
 5 many of the issues raised by the proposed settlement. Bluetooth, 654 F.3d 935 (9th Cir.  
 6 2011).

7 The Bluetooth case arose out of the failure to disclose the risk of hearing loss  
 8 associated with wireless Bluetooth headsets. The parties entered into a proposed  
 9 nationwide settlement, its terms providing for injunctive relief (in the form of safety  
 10 warnings on the products' packaging and manuals), a \$100,000 cy pres award, notice  
 11 costs of up to \$1.2 million, an incentive award of \$12,000, and attorneys' fees and costs  
 12 in the amount of \$850,000. The district court approved the settlement, and seven  
 13 objectors appealed both the final approval order and the order awarding attorneys' fees.

14 The Ninth Circuit's opinion started by noting that its typical practice was to review  
 15 the final approval order first, because a vacatur would render moot any challenge to the  
 16 fee order. However, because the objectors' challenge to the settlement agreement was  
 17 largely based on the alleged unreasonableness of the fee award, the court started by  
 18 evaluating the fee order.

19 The Bluetooth court set forth the applicable legal standard, noting that the lodestar  
 20 method was "appropriate in class actions brought under fee-shifting statutes . . . where  
 21 the relief sought – and obtained – is often primarily injunctive in nature and thus not  
 22 easily monetized." 654 F.3d at 941. The court also explained that the lodestar amount  
 23 can be adjusted depending on the quality of representation, the benefit obtained for the  
 24

25 \_\_\_\_\_  
 26 <sup>3</sup> In some cases, the Ninth Circuit has seemingly limited its characterization of the district  
 27 court as a fiduciary, discussing it only in the context of awarding attorneys' fees from a  
 28 common fund that would otherwise be paid to the class members. See, e.g., Vizcaino v.  
Microsoft Corp., 290 F.3d 1043, 1052 (9th Cir. 2002). However, more recent cases such  
 as Allen have discussed the fiduciary duty's scope more broadly, applicable to the entire  
 settlement approval process. Allen, 787 F.3d at 1223 (citing Sullivan v. DB Investments,  
Inc., 667 F.3d 273, 319 (3rd Cir. 2011); Reynolds, 288 F.3d at 280)).

1 class, the complexity and novelty of the issues presented, and the risk of non-payment,  
2 emphasizing that “foremost among these considerations, however, is the benefit obtained  
3 for the class.” Id. at 942.

4 Applying that standard, the Ninth Circuit noted that the district court applied the  
5 lodestar method and approved the award even after “finding numerous defects” in the  
6 lodestar calculation, including “duplicative entries, excessive charges for most categories  
7 of services, a substantial amount of block billing, and use of an inflated hourly rate.” 654  
8 F.3d at 943.

9 On appeal, the objectors argued that the district court should not have relied  
10 exclusively on the lodestar method, and should have used the “constructive common  
11 fund” approach, which had been adopted by other circuits as a way to safeguard against  
12 “private agreements to structure artificially separate fee and settlement arrangements”  
13 designed to “circumvent the 25% benchmark on what is in economic reality a common  
14 fund situation.” In other words, creating separate funds for the class and for attorneys’  
15 fees could be an attempt to avoid direct comparison of the two amounts, and to convince  
16 the court that it need look no further than the lodestar figure.

17 The Ninth Circuit stopped short of requiring the district court to treat it as a  
18 constructive common fund case, but it did “agree with objectors that the district court  
19 needed to do more to assure itself – and us – that the amount awarded was not  
20 unreasonably excessive in light of the results achieved.” 654 F.3d at 943. The court  
21 explained that the lodestar method “may be a perfectly appropriate method of fee  
22 calculation,” but that courts were encouraged to “guard against an unreasonable result by  
23 cross-checking their calculations against a second method.” And “if the district court here  
24 took that second look, the record does not reflect it.”

25 In particular, the Ninth Circuit was “concerned that the amount awarded was  
26 83.2% of the total amount defendants were willing to spend to settle the case.” To reach  
27 that figure, the court added the attorneys’ fee and costs awards, the incentive payment,  
28 and the cy pres payment into a “constructive common fund.”

1 While the Bluetooth court did not say that the fee award was per se unreasonable,  
 2 it did vacate the award and remanded it to the district court to (1) decide whether to treat  
 3 the settlement as a common fund, (2) choose the lodestar or percentage method for  
 4 calculating a reasonable fee and make explicit calculations, (3) ensure that the fee award  
 5 is reasonable considering, among other things, the degree of success in the litigation and  
 6 benefit to the class, and (4) if standard calculations yield an unjustifiably disproportionate  
 7 award, adjust the lodestar or percentage accordingly. 654 F.3d at 945. After vacating  
 8 the fee award, the Ninth Circuit then explained that “because the parties expressly  
 9 negotiated a possibly unreasonable amount of fees, and because the district court did not  
 10 take this possibility into account in reviewing the settlement’s fairness the first time  
 11 around, we must vacate and remand the approval order as well.” Id. at 945-46.

12 Applying the reasoning of Bluetooth to this case, the court first finds that, as in  
 13 Bluetooth, much of the objectors’ challenge to the fairness of the settlement relates to the  
 14 imbalance between the proposed fee award and the benefit going to the class. For  
 15 instance, one objector emphasized the “obscene amount of money to attorneys and the  
 16 paltry amount to the actual consumers,” while another complained that “the value of the  
 17 proposed settlement and the portion paid to the claimants is too low,” and that the  
 18 “lawyers are not entitled to 68.5%<sup>4</sup> of the payout.” See Dkt. 176, 183. Thus, as in  
 19 Bluetooth, the court will start by evaluating the requested attorneys’ fees.

20 Class counsel urges application of the lodestar method, emphasizing that the  
 21 requested fee award represents a negative multiplier of .76. However, the court cannot  
 22 simply accept counsel’s lodestar figure without any scrutiny, because the court’s duty is  
 23 to “calculate the lodestar figure based on the number of hours reasonably expended on  
 24 the litigation.” Bluetooth, 654 F.3d at 944 (emphasis in original). In this case, the court  
 25

26 \_\_\_\_\_  
 27 <sup>4</sup> The parties correctly point out that this objector “apparently and mistakenly uses the  
 28 \$5,000,000 CAFA jurisdiction allegation in the complaint as the denominator in his  
 equation.” Dkt. 186 at 16. However, the ironic result of this mathematical error is that the  
 objector understated the percentage of the payout going to the attorneys, as the actual  
 figure is 80.3%.

1 has no basis on which to find that the fees incurred were reasonable, because none of  
2 plaintiffs' attorneys have provided detailed time records. Instead, they rely on summary  
3 figures showing the amount of time billed by each attorney and/or the amount of time  
4 spent on general tasks (broken down into very high-level categories, such as "discovery"  
5 or "class certification"). See Dkt. 177-1 through 177-4.

6 In Bluetooth, the Ninth Circuit took issue with the district court's approval of the  
7 fee award, noting the presence of "numerous defects" in the lodestar's calculation,  
8 including duplicative billing entries, excessive charges, and block billing. 654 F.3d at  
9 943. The same defects might very well be present in this case, but because the billing  
10 records were not filed with the court, there is no way to tell. Regardless, even if the court  
11 could make a determination as to the reasonableness of the lodestar figure, the court is  
12 guided by the Bluetooth court's recommendation to "guard against an unreasonable  
13 result by cross-checking their calculations against a second method."

14 As did the Bluetooth court, this court will apply the constructive common fund  
15 approach. And as was the case in Bluetooth, the parties have structured the proposed  
16 attorneys' fee award separately from the funds available to the class. The Bluetooth  
17 court noted prior courts' warning that "private agreements to structure artificially separate  
18 fee and settlement arrangements should not enable parties to circumvent the 25%  
19 benchmark requirement on what is in reality a common fund situation." 654 F.3d at 943  
20 (internal citations omitted); see also Staton, 327 F.3d at 964 ("That the defendant in form  
21 agrees to pay the fees independently of any monetary award or injunctive relief provided  
22 to the class in the agreement does not detract from the need carefully to scrutinize the  
23 fee award."); Johnston v. Comerica Mortgage Corp., 83 F.3d 241, 246 (8th Cir. 1996)  
24 ("[I]n essence the entire settlement amount comes from the same source. The award to  
25 the class and the agreement on attorney fees represent a package deal.").

26 Under the "constructive common fund" approach, the attorneys are receiving  
27 80.3% of the "total amount defendants were willing to spend to settle the case" – with the  
28 settlement administrator receiving 12.7%, and the claimants (other than the class

1 representatives) receiving 6.5% of the total amount paid.<sup>5</sup> Whereas the Bluetooth court  
 2 found it unacceptable for class counsel to receive eight times the amount of the class  
 3 recovery, noting the “gross disproportion between the class award and the negotiated fee  
 4 award,” class counsel in this case aims to receive over twelve times the amount of the  
 5 class recovery. See also Allen, 787 F.3d at 1224 (finding disproportionate distribution  
 6 where counsel received three times the maximum class recovery). Even the settlement  
 7 administrator would receive nearly twice the amount that the class would receive.<sup>6</sup>

8 The Bluetooth court made clear that, when evaluating the reasonableness of an  
 9 attorneys’ fee award, the “foremost” consideration is the benefit obtained for the class.  
 10 Under this standard, the requested attorneys’ fee award is problematic. As mentioned  
 11 above, class counsel would receive over twelve times the amount of the class recovery  
 12 under the proposed settlement. The average claimant would receive \$180.56, although  
 13 even that number is skewed by the claimants on the low end of the mileage range. More  
 14 than one-fifth of the claimants will receive \$20, and more than one-third of the claimants  
 15 will receive \$60 or less.

16 Looking more closely at those bottom two tiers, the 561 claimants in those  
 17 categories (who represent more than one-third of the class) would receive a total of  
 18 \$18,310.81. Meanwhile, the four class representatives would receive a total of \$20,000  
 19 (\$5,000 each). And as mentioned above, class counsel would receive \$3,425,000. The  
 20 court also notes that, in Bluetooth, the class received a benefit in the form of injunctive

21 \_\_\_\_\_  
 22 <sup>5</sup> The total amount of the constructive common fund is \$4,265,564.55, which includes the  
 23 \$278,056.41 to be paid to the claimants, the \$20,000 service payments to be paid to the  
 24 four class representatives, the \$3,425,000 to be paid to class counsel, and the  
 25 \$542,508.14 to be paid to the settlement administrator.

26 <sup>6</sup> Although it does not affect the court’s decision, the court does note the discrepancy  
 27 between the amount requested for the settlement administrator at preliminary approval –  
 28 which was “estimated to be in the range of \$179,688 to \$377,669” – and the amount that  
 the settlement administrator now claims to have incurred – \$542,508.14. Compare Dkt.  
 159 at 7 with Dkt. 201 at 1. This new, higher figure is not mentioned anywhere in the  
 motion for final approval, the motion for attorneys’ fees, or the proposed order, leaving  
 the court unclear as to whether the parties are asking for final approval of an amount that  
 far exceeds the amount preliminarily approved. Incidentally, if the settlement  
 administrator is to receive only the \$377,669 that was preliminarily approved, then class  
 counsel’s percentage of the constructive common fund jumps to 83.5%.

1 relief, which was described by the plaintiffs' counsel as the "primary objective of the  
2 lawsuit." 654 F.3d at 945. No such benefit was provided to the class in this case, as the  
3 challenged practice ceased long before the filing of this suit.

4 The court is aware that, given the relatively small percentage of Affected Vehicle  
5 owners who may have experienced brake failure, even a reasonable settlement will likely  
6 result in class counsel recovering more than the class. For instance, if every single one  
7 of the 1,540 valid claimants had received the "maximum" \$1,000 in repair costs, it would  
8 still result in class recovery of only \$1,540,000, less than half of the amount that class  
9 counsel would receive under the proposed settlement. Despite that disparity, the court  
10 would not be troubled by such a settlement, because the class would undoubtedly be  
11 receiving a significant benefit. In fact, if the experiences of the Bankses and the  
12 Soloways are any indication, many of the class members may have paid less than the  
13 estimated \$1,000 in order to fully repair their vehicles. As mentioned above, Mr. Soloway  
14 paid \$618.84 for DSS replacement, and the Bankses paid \$967.13. If these figures are  
15 representative, then the claimants could be fully compensated at an average of just under  
16 \$800 per claimant, or just over \$1.2 million for all 1,540 claimants.<sup>7</sup> Even though the  
17 proposed attorneys' fee award is nearly triple that amount, the court obviously could have  
18 no issue with a settlement where the claimants are receiving a recovery equal to, or even  
19 closely approaching, what could be obtained at trial.

20 In contrast, where more than one-third of the claimants are receiving \$60 or less –  
21 i.e., 6% or less of the estimated repair cost; and where more than one-fifth of the  
22 claimants are receiving \$20 or less, the grossly disproportionate amount of attorneys'  
23 fees is problematic. In this scenario, it cannot be said that the class is receiving a  
24

---

25 <sup>7</sup> The settlement administrator's report also suggests that the class representatives'  
26 figures are representative. For instance, claimants in the 80% reimbursement category  
27 would receive an average payout of \$574.64, indicating that their average repair cost was  
28 \$718.30; claimants in the 57.5% reimbursement category would receive an average  
payout of \$408.17, indicating that their average repair cost was \$709.86; and claimants in  
the 20% reimbursement category would receive an average payout of \$151.76, indicating  
that their average repair cost was \$758.80. See Dkt. 201.

1 “substantial benefit” sufficient to justify the much larger benefit conferred upon class  
2 counsel. Accordingly, the motion for attorneys’ fees is DENIED.

3 As was the case in Bluetooth, approval of the settlement agreement was not  
4 conditioned on the award of attorneys’ fees, so the rejection of the fee award does not  
5 necessitate rejection of the settlement agreement. As mentioned above, when evaluating  
6 the fairness of a proposed class action settlement, courts consider the following factors:

7 (1) the strength of the plaintiff’s case, (2) the risk, expense, complexity, and  
8 likely duration of further litigation, (3) the risk of maintaining class action  
9 status throughout the trial, (4) the amount offered in settlement, (5) the  
10 extent of discovery completed and the stage of the proceedings, (6) the  
11 experience and views of counsel, (7) the presence of a governmental  
12 participant, and (8) the reaction of the class members to the proposed  
13 settlement.

14 Churchill, 361 F.3d at 575.

15 Starting with (1), the strength of the plaintiffs’ case, plaintiffs now argue that, while  
16 they have a “strong case,” there still remains “the presence of significant risks,” especially  
17 for the non-California class members, whose states’ laws might preclude recovery.

18 The issue regarding the non-California class members affects not only this factor,  
19 but the final approval motion as a whole. The Ninth Circuit has held that, “[p]rior to formal  
20 class certification, there is an even greater potential for breach of fiduciary duty owed the  
21 class during settlement,” and thus, “such agreements must withstand an even higher  
22 level of scrutiny for evidence of collusion or other conflicts of interest than is ordinarily  
23 required.” Bluetooth, 654 F.3d at 946. As mentioned above, the court has already  
24 certified a class of California class members, but the proposed settlement involves a  
25 broader nationwide class, for which plaintiffs have not previously moved for certification.  
26 Thus, the proposed nationwide settlement class is technically a pre-certification class.  
27 However, not all of the concerns motivating this “higher level of scrutiny” for pre-  
28 certification class are applicable here. For instance, unlike most pre-certification cases,  
extensive discovery has been conducted in this case, lessening the concern over  
informational deficiencies between the parties. See, e.g., In re General Motors, 55 F.3d

1 at 805 (internal citations omitted). That said, other courts' concerns about defendants  
2 using the uncertainty surrounding class certification to exert "improper pressure" on class  
3 counsel appears to be as present here as it would in any pre-certification case. See,  
4 e.g., Weinberger v. Kendrick, 698 F.2d 61, 72-73 (2nd Cir. 1982). Even though there is  
5 no certified nationwide class, the court will give the parties the benefit of the doubt and  
6 apply the lower, post-certification level of scrutiny.

7 In discussing the strength of their case, plaintiffs also note that defendant "has  
8 contested and would continue to contest vigorously the merits of class members' claims,"  
9 and that it "has interposed several defenses to the claims asserted, including that it had  
10 no knowledge of the defect." Dkt. 186 at 9. However, an evaluation of the "strength of  
11 plaintiffs' case" requires more than just a recitation of defendant's anticipated arguments,  
12 it requires analysis of the merits of those arguments.

13 Not surprisingly, before the proposed settlement was reached, plaintiffs had more  
14 to say regarding defendant's alleged knowledge of the defect. In their motion for class  
15 certification, plaintiffs argued that "[b]y 2004, Nissan knew of the DSS safety defect,"  
16 citing to internal documents showing awareness of the problem, as well as NHTSA  
17 complaints and warranty claims from that time period. See Dkt. 109 at 5-8. In fact,  
18 plaintiffs specifically referenced Nissan's attempts to have this suit dismissed based on  
19 its alleged lack of knowledge of the defect, and stated that Nissan "made these  
20 representations to the court with reckless disregard to a wealth of contrary knowledge  
21 confirmed in its own internal documents." Dkt. 109 at 2.

22 Plaintiffs went on to cite evidence showing that, even after knowing about the  
23 problem, Nissan continued to "promote" a "faulty" reprogramming fix, even though it  
24 "knew that the faulty reprogramming fix did not work." Dkt. 109 at 9.

25 In their reply, plaintiffs cited even more evidence showing that "Nissan has been  
26 investigating the DSS failures since the start of production in 2003," and that it had  
27 "created a task force to investigate [DSS] failures." Dkt. 111 at 5. Plaintiffs insisted that  
28 the evidence showed that "Nissan is ultimately responsible for taking five years to

1 effectively fix the defect after discovering it, and never disclosing it to consumers.” *Id.* at  
2 6. While plaintiffs’ cited evidence is not dispositive, it must be factored into the court’s  
3 evaluation of the strength of plaintiffs’ case.

4 Overall, the court agrees that the non-California plaintiffs would face significant  
5 obstacles if the case were to be litigated, because of the differences in various states’  
6 laws. That said, given the incompleteness of plaintiffs’ characterization of the strength of  
7 their case, the court finds this factor to weigh only slightly in favor of approving the  
8 proposed settlement.

9 Moving to factor (2), the risk, expense, complexity, and likely duration of further  
10 litigation, plaintiffs argue that, if litigation were to continue, the class would face  
11 “significant hurdles, including additional merits discovery, expert witness challenges, a  
12 summary judgment motion wherein defendant would seek a binding dismissal of all  
13 members’ claims, and a lengthy, technical trial on the merits.” The court agrees that  
14 further litigation would entail expense and complexity, but the final approval motion  
15 provides no basis on which to evaluate the actual risk to the class. As with the previous  
16 factor, by simply reminding the court that defendant “will seek a binding dismissal” at  
17 summary judgment, plaintiffs avoid any discussion of the risk of defendant actually  
18 obtaining such a dismissal. Because there is no question that continued litigation would  
19 involve additional time, expense, and complexity, the court finds that factor (2) weighs in  
20 favor of approving the settlement. However, due to the lack of discussion regarding the  
21 risk to the class, the court will give only minimal weight to this factor.

22 As to factor (3), the risk of maintaining class action status throughout trial and on  
23 appeal, the court is somewhat puzzled by plaintiffs’ argument. They point out that  
24 “defendant maintained that plaintiffs’ claims were not subject to class-wide  
25 determination,” because, among other things, “class issues are not predominant where  
26 not all class members’ vehicles have manifested the alleged latent defect.” Dkt. 186 at  
27 11. Plaintiffs further note that “defendant vigorously opposed class certification, and  
28 would be able to appeal the court’s certification decision as of right after a decision on the

1 merits.” Id.

2           However, in making this argument, plaintiffs appear to ignore the fact that  
3 defendant has already sought permission to appeal the court’s order certifying a class, a  
4 request that the Ninth Circuit denied nearly two years ago. See Dkt. 130. Nor does the  
5 fact that defendant “vigorously opposed” class certification (in the past tense) have any  
6 bearing on the risk of maintaining the current class action status. Overall, given the lack  
7 of any changed circumstances since the court’s certification of a California class and the  
8 Ninth Circuit’s denial of permission to appeal that certification, the court finds that  
9 plaintiffs have not demonstrated any risk of losing class action status. However, due to  
10 the above-mentioned differences in states’ laws, the court does find there to be  
11 significant risk in obtaining non-conditional certification for a nationwide class. And  
12 because the proposed settlement class is a nationwide class, the court finds this factor to  
13 weigh in favor of approving the settlement.

14           Next is factor (4), the amount offered in settlement. Plaintiffs argue that the  
15 settlement provides “substantial benefits” to the class, including “crucial notice of the  
16 alleged DSS defect” and “partial reimbursement of their expenses.” As an initial matter,  
17 the already-certified California class would have received notice of the defect immediately  
18 after certification, and the only reason that they did not receive such notice was this  
19 pending proposed settlement. Thus, as to the California class members, such notice  
20 should not be considered as one of the benefits conferred by the proposed settlement.

21           Regarding the “partial reimbursement” portion of the proposed settlement, the  
22 court has already discussed the value of the relief that the class would receive. For those  
23 reasons, the court finds that this factor weighs heavily against approving the proposed  
24 settlement.

25           As to factor (5), the extent of discovery and the state of the proceedings, the  
26 motion points out that the parties have undergone more than four years of investigation  
27 and litigation, including 18,000 pages of technical documents produced by defendant.  
28 The court agrees that the record in this case is well-developed, and finds that this factor

1 weighs in favor of approving the proposed settlement. Plaintiffs further argue that it is  
2 “appropriate to consider class counsel’s prior experience with consumer class actions,  
3 including litigation involving automotive defects,” but the court disagrees, as such  
4 consideration would impermissibly mix factor (5) with factor (6).

5 Turning to factor (6), the experience and views of counsel, plaintiffs’ counsel  
6 contends that the proposed settlement is an “excellent result,” and cite a declaration by  
7 the parties’ mediator also stating that “this settlement is an excellent result.” This factor  
8 weighs in favor of approving the proposed settlement, although the result is clearly more  
9 “excellent” for the attorneys than it is for the class members.

10 Factor (7) relates to the presence of a government participant, which is not  
11 applicable in this case.

12 Finally, factor (8) considers the reaction of the class to the proposed settlement.  
13 Plaintiffs point out that only 101 class members have objected or opted out of the  
14 settlement, though they incorrectly state that this represents less than 0.012% of the  
15 class – because while notice was sent to 857,444 current and former Affected Vehicle  
16 owners, there were only 263,967 Affected Vehicles, so the latter number should be used  
17 as a denominator. Regardless, it appears clear that the number of objections is relatively  
18 small.

19 That said, the “reaction of the class” must account not only for the objections and  
20 opt-outs, but also the claim submission rate. The report filed by the claims administrator  
21 stated that, as of October 9, 2015, 2,100 claims had been submitted, of which 1,540 were  
22 determined to be valid. In other words, only 0.58% of the class submitted a valid claim  
23 (using 263,967 as the denominator – if 857,444 is used as the denominator, as it was  
24 above, then the claim submission rate drops to 0.17%). And while some courts have  
25 held that “silence constitutes tacit consent to the agreement,” “a combination of  
26 observations about the practical realities of class actions has led a number of courts to be  
27 considerably more cautious about inferring support from a small number of objectors to a  
28 sophisticated settlement.” See In re General Motors, 55 F.3d at 812 (internal citations

1 omitted). The court finds this factor to be neutral.

2 Overall, as was the case in Bluetooth, a number of the Churchill factors weigh in  
3 favor of approving the proposed settlement, and a number weigh against it. As in  
4 Bluetooth, “further litigation would be time-consuming, complex, and expensive for both  
5 sides,” the parties have “consulted experts and exchanged significant discovery  
6 permitting an informed decision about settlement,” and the settlement was “negotiated  
7 over an extended period of time by experienced counsel on both sides, and was  
8 mediated and approved by a retired judge.” Bluetooth, 654 F.3d at 946.

9 However, those factors cannot alleviate the court’s concerns over the sufficiency  
10 of the amounts offered in settlement. As mentioned above, under this proposed  
11 settlement, more than one-third of the claimants would receive a \$60 (or less)  
12 reimbursement of a \$1,000 repair bill, and more than one-fifth of the claimants would  
13 receive \$20 or less. Given that the “primary concern” of the settlement approval process  
14 is the “protection of those class members . . . whose rights may not have been given due  
15 regard by the negotiating parties,” the court finds that the strikingly low reimbursement  
16 amounts must figure prominently in the court’s assessment of the settlement. See  
17 Officers for Justice v. Civil Service Com’n of the City and County of San Francisco, 688  
18 F.2d 615, 624 (9th Cir. 1982).

19 The parties have attempted to justify the \$60 or \$20 caps by arguing that “people  
20 have had the vehicles for a longer period of time,” and thus, the vehicle’s value may have  
21 depreciated. Dkt. 196 at 11. The court pointed out that “even on a depreciated vehicle,  
22 the cost to replace it would be the same,” and more importantly, the court sees no  
23 reasonable basis for dropping the amount of reimbursement to below \$60 for more than a  
24 third of the claimants, and down to \$20 for one-fifth of the claimants. The court also  
25 notes that multiple objectors first experienced DSS problems when they were under  
26 48,000 miles (at which time they would have been eligible for the maximum \$800  
27 reimbursement under the proposed settlement), but when they took their vehicles in for  
28 repair, they were told that the problem could not be fixed.

1 For instance, objector Todd Ouzts writes that he was “plagued by the braking  
2 failures described in the lawsuit well before the 48,000 mile mark,” but because “Infiniti  
3 could not find the cause,” he was “merely told to pull over immediately and restart the  
4 vehicle.” See Dkt. 176. Similarly, objector Theresa Dahlen first experienced problems at  
5 35,881 miles, but the problems arose only sporadically, and she was told by Nissan that  
6 “they couldn’t fix it if it wasn’t acting up at that time.” See Dkt. 178. When combined with  
7 the fact that Nissan promoted an ineffective<sup>8</sup> reprogramming fix starting in 2006, it seems  
8 apparent that the class members were steered away from DSS replacement when  
9 problems first started to present themselves.

10 To be clear, the court is aware of no evidence that Nissan intentionally delayed  
11 repairing their customers’ vehicles in order to gain some advantage in anticipated  
12 litigation. However, the parties’ methodology of tying reimbursement amounts to vehicle  
13 mileage has the effect of allowing defendant to profit from their sluggishness in fixing the  
14 DSS failures. As some customers were being told that the problem could not be  
15 diagnosed, or that a reprogram would solve the problem, their reimbursement totals were  
16 dropping, from a maximum of \$800, potentially all the way down to \$20.

17 Simply put, the court cannot find that a settlement which would reimburse a  
18 significant portion of the claimants only \$20 of a potential \$1,000 repair bill serves the  
19 interests of the class. Even when viewed with the remaining Churchill factors, some of  
20 which weigh in favor of the settlement, the court finds that the motion for final settlement  
21 approval must be denied.

22 Moreover, in addition to considering the Churchill factors, the court must also  
23 determine whether the settlement is the result of “collusion between the negotiating  
24 parties.” See, e.g., Officers for Justice, 688 F.2d at 625. The Bluetooth court spoke of  
25 the need to be “vigilant not only for explicit collusion, but also for more subtle signs that  
26 class counsel have allowed pursuit of their own self-interests and that of certain class

27 \_\_\_\_\_  
28 <sup>8</sup> Nissan admits that the reprogramming fix “did not have the outcome that was desired.”  
Dkt. 196 at 14.

1 members to infect the negotiations.” 654 F.3d at 947. The court then went through three  
2 such signs:

3 (1) when counsel receive a disproportionate distribution of the settlement,  
4 or when the class receives no monetary distribution but class counsel are  
5 amply rewarded,

6 (2) when the parties negotiate a “clear sailing” arrangement providing for  
7 the payment of attorneys’ fees separate and apart from class funds, which  
8 carries the potential of enabling a defendant to pay class counsel excessive  
9 fees and costs in exchange for counsel accepting an unfair settlement on  
10 behalf of the class, and

11 (3) when the parties arrange for fees not awarded to revert to defendants  
12 rather than be added to the class fund.

13 The Bluetooth court found that all three signs were present. 654 F.3d at 947.

14 Here, too, all three signs are present. First, as has been discussed above,  
15 counsel is receiving over twelve times the amount paid to the class members.

16 Second, the settlement agreement does contain a “clear sailing” provision,  
17 whereby defendant agreed not to contest class counsel’s requested fees, and providing  
18 for such fees to be paid separately from the funds made available to the class. As the  
19 Bluetooth court noted, “the very existence of a clear sailing provision increases the  
20 likelihood that class counsel will have bargained away something of value to the class.”  
21 Bluetooth, 654 F.3d at 948 (citing Weinberger, 925 F.2d at 525); see also Redman v.  
22 RadioShack Corp., 768 F.3d 622, 637 (7th Cir. 2014) (“Because it’s in the defendant’s  
23 interest to contest that request in order to reduce the overall cost of the settlement, the  
24 defendant won’t agree to a clear-sailing clause without compensation – namely a  
25 reduction in the part of the settlement that goes to the class members, as that is the only  
26 reduction class counsel are likely to consider.”). Although the settlement agreement  
27 states that the allowance or disallowance of attorneys’ fees is “not part of the settlement”  
28 and “are to be considered by the court separately from the court’s consideration of the  
fairness, reasonableness, and adequacy of the settlement” (Dkt. 160-1 at ¶ 37), that  
provision cannot override Ninth Circuit precedent, which requires the court to scrutinize

1 the fee arrangement for evidence that the settlement itself was the product of collusion.  
2 See Bluetooth, 654 F.3d at 947; Allen, 787 F.3d at 1224.

3 Third and finally, the proposed settlement does indeed provide for any reduction of  
4 the attorneys' fee award to revert to defendant. See Dkt. 177 at 12. As the Bluetooth  
5 court observed, "a kicker arrangement reverting unpaid attorneys' fees to the defendant  
6 rather than to the class amplifies the danger of collusion already suggested by a clear  
7 sailing provision." 654 F.3d at 949.

8 While the presence of the three "warning signs" does not mean that the settlement  
9 cannot still be fair, reasonable, or adequate, a district court faced with "multiple indicia of  
10 possible implicit collusion" has a "special obligation to assure itself that the fees awarded  
11 in the agreement" are not "unreasonably high." Bluetooth, 654 F.3d at 947 (citing Staton,  
12 327 F.3d at 965); see also Allen, 787 F.3d at 1224. If the fees are unreasonably high,  
13 "the likelihood is that the defendant obtained an economically beneficial concession with  
14 regard to the merits provisions, in the form of lower monetary payments to class  
15 members or less injunctive relief for the class than it otherwise could have obtained."  
16 Bluetooth, 654 F.3d at 947 (citing Staton, 327 F.3d at 964). The court also notes that, by  
17 expanding the settlement class to a nationwide one, defendant is able to "buy peace" in a  
18 manner that would have been impossible if the parties had continued to litigate the  
19 California-only class. Thus, not only is defendant receiving an "economically beneficial  
20 concession" in the form of "lower monetary payments to class members," it is also  
21 receiving a benefit in the form of nationwide litigation immunity.

22 The parties attempt to preclude any inference of collusion by pointing to the  
23 involvement of a neutral mediator, but the Bluetooth court was faced with the same  
24 situation, and found that "the mere presence of a neutral mediator, though a factor  
25 weighing in favor of a finding of non-collusiveness, is not on its own dispositive of  
26 whether the end product is a fair, adequate, and reasonable settlement agreement." 654  
27 F.3d at 948.

28 In Bluetooth, the Ninth Circuit found that "[g]iven the questionable features of the

1 fee provision,” the district court’s approval order was required to provide a “clear  
2 explanation of why the disproportionate fee is justified and does not betray the class’s  
3 interests.” 654 F.3d at 949. Because the district court did not do so, the approval order  
4 was vacated.

5 In this case, the court cannot explain why the disproportionate attorneys’ fees are  
6 justified and do not betray the class’s interests, nor can it meet its “special obligation to  
7 assure itself that the fees awarded in the agreement” are not “unreasonably high.”  
8 Simply put, a proposed settlement where 93.5% of the total payout goes to those directly  
9 participating in the litigation (i.e., class counsel, the settlement administrator, and the  
10 class representatives) creates the impression that the proposed settlement has been  
11 negotiated for their benefit, at the expense of the unnamed class members. Put another  
12 way, where 6.5% of the payout goes to the class members, and 80.2% goes to the  
13 attorneys purporting to represent those class members, the tail is clearly wagging the  
14 dog.

15 **CONCLUSION**

16 For the foregoing reasons, the motion for final settlement approval and the motion  
17 for attorneys’ fees are DENIED.

18  
19 **IT IS SO ORDERED.**

20 Dated: November 30, 2015
